

## II. CONSTRAINTS ANALYSIS AND SITE SELECTION

### A. Prior to Selecting a Building Site.

#### 1. Constraints analysis.

Each development application subject to the Hillside Development Standards and Guidelines shall be accompanied by a constraints analysis when it is deemed necessary by the Town to identify the most appropriate area or areas on the lot for locating buildings given the existing constraints of the lot. This is a critical step in the overall planning and design of projects in the hillsides. When all constrained areas have been identified and mapped, the remaining area(s) will be designated as the "LEAST RESTRICTIVE DEVELOPMENT AREA" (LRDA). These are the areas most appropriate for development.

To ensure that new development is sensitive to the goal and objectives of the Hillside Development Standards and Guidelines and respects the existing site constraints, the following elements shall be mapped by appropriate professionals and taken into consideration when determining a site's LRDA:

- Topography, with emphasis on slopes over 30%
- Vegetation such as individual trees, groupings of trees and shrubs, habitat types
- Drainage courses and riparian corridors
- Septic systems
- Geologic constraints including landslides and active fault traces
- Wildlife habitats and movement corridors
- Visibility from off site
- Areas of severe fire danger
- Solar orientation and prevailing wind patterns
- Significant Ridgelines

Many of the above topics are covered in more detail in Chapter II.B. and Chapter III. The accurate determination of the LRDA early in the planning process could avoid delays once an application has been submitted. Site specific studies such as geotechnical or other environmental evaluations, tree survey and/or topographic survey may be necessary to accurately determine the LRDA.

## **2. Consultation with Neighbors.**

Before siting and designing the house and landscaping, the property owner, architect or builder should meet with neighbors to discuss any special concerns they might have. Resolution of issues early in the design process can save time and cost as well as reducing the processing time for applications. If a conflict occurs between a property owner's desire to develop their property and legitimate issues raised by a neighbor, a design solution will be sought that attempts to balance all issues or concerns that are raised by both parties.

## **3. Pre-application meeting/staff consultation/site visit.**

Before designing a project, the property owner/architect/builder is strongly encouraged to meet with Town staff to consider a building location that best preserves the natural terrain and landscape of the lot and positively addresses the objectives of the Hillside Development Standards and Guidelines. On heavily wooded lots, or on lots where trees may be impacted by proposed development, an arborist's report shall be prepared which evaluates potential tree impacts. The report shall be prepared at the applicant's expense.

## **B. View Analysis.**

### **1. Viewing platforms.**

Each development project with the potential for being visible (see glossary for definition) from any established viewing platform shall be subject to a view analysis. ("Potential" is defined as capable of being seen from a viewing platform if trees or large shrubs are removed, significantly pruned, or impacted by construction.) The view analysis shall be conducted in compliance with established Town procedures using story poles that identify the building envelope. After installing the story poles, the applicant shall take photographs of the project from appropriate established viewing platforms that clearly show the story poles and/or house and subject property. Visual aids such as photo simulations or three dimensional illustrations and/or a scale model may be required when it is deemed necessary to fully understand the impacts of a proposed project.

The locations of the viewing platforms are shown on the map on the next page, and are as follows:

1. Blossom Hill Road/Los Gatos Boulevard
2. Los Gatos - Almaden Road/Selinda Way (across from Leigh High School)
3. Hwy 17 overcrossing/Los Gatos - Saratoga Road (Highway 9)
4. Main Street/Bayview Avenue
5. Other location(s) as deemed appropriate by the deciding body

**(viewing platform map)**

## 2. Determination of significant ridgelines.

Significant ridgelines include:

- a. Aztec Ridge;
- b. The ridge between Blossom Hill Road and Shannon Road;
- c. Other ridgelines as determined by the approving body

## C. Selecting the building site.

### Standards:

1. **Locate buildings within the Least Restrictive Development Area.**
2. **Preserve views of highly visible hillsides.** Views of the hillsides shall be protected from adverse visual impacts by locating buildings on the least visible areas of the LRDA.
3. **Reduce visual impact.** The visual impact of buildings or portions of buildings that can be seen from the viewing platforms shall be mitigated to the greatest extent reasonable by reducing the height of the building or moving the structure to another location on the site. Providing landscape screening is not an alternative to reducing building height or selecting a less visible site.
4. **Ridgeline view protection.** Whenever possible within the significant ridgeline areas, no primary or accessory building shall be constructed so as to project above the physical ridgeline (not including vegetative material) as seen from any viewing platform. A significant ridgeline means any hill or mountain, the uppermost part of which forms the skyline visible from any established viewing platform.

Refer to the  
Blossom Hill  
Comprehensive  
Open Space  
Study

If a building cannot be sited below a significant ridgeline because the area away from it is not the LRDA or is otherwise not suitable for development, the following shall apply:

- a. The building shall not exceed 18 feet in height.
- b. Landscaping shall be provided to screen the building from view to the greatest extent possible.

**Houses do not project above significant ridgeline**

- 5. Preserve natural features.** Existing natural features shall be retained to the greatest extent feasible and integrated into the development project. Site conditions such as existing topography, drainage courses, rock outcroppings, trees, significant vegetation, wildlife corridors, and important views will be considered as part of the site analysis and will be used to evaluate the proposed site design.
- 6. Avoid hazardous building sites.** Building in areas with more than 30 percent slope or areas containing liquefiable soil with poor bearing capacity, slide potential, fault rupture zones and other geotechnical or fire hazards shall be avoided unless no alternative building site is available.
- 7. Protect riparian corridors.** Building sites shall be set back an appropriate distance from riparian corridors to be determined on a site by site basis. Natural drainage courses should be preserved in as close to their natural location and appearance as possible.
- 8. Protect wildlife.** Existing wildlife usage of the site and in particular any existing wildlife corridors shall be identified and avoided to the maximum extent possible.

## **Guidelines:**

- 1. Solar orientation.** Building sites should be selected to take maximum advantage of solar access.
- 2. Impact on adjacent properties.** Building sites should be located where they will have the least impact on adjacent properties and respect the privacy, natural ventilation and light, and views of neighboring homes.
- 3. Minimize grading.** The building site should be located to minimize grading.
